EDUCATION

Bachelor of Science in Mechanical Engineering
Arizona State University – Tempe, AZ

Expected December 2026
3.3 GPA

TECHNICAL SKILLS

Certifications: Lean Six Sigma Yellow Belt, NX Design Associate, Certified SolidWorks Professional (CSWP): Mechanical Design, Certified SolidWorks Associate (CSWA): Simulation, CSWA: Electrical, CSWA: Additive Manufacturing, IPC A-610 Specialist

Software: GOM Inspect, Simufact, Materialise Magics, Siemens NX, SolidWorks, Fusion 360, ANSYS, CFTurbo, AutoCAD, MATLAB, Minitab, OpenRocket, Visual Studio Code, GitHub, JIRA, Confluence, Teamcenter, Oracle, FactoryLogix MES

Hardware: Laser Powder Bed Fusion (LPBF) Printers, Fused Deposition Modeling (FDM) Printers, Stereolithography (SLA) Printers, Circuit Board Manufacturing Hardware, Wafer Processing Equipment, Fabrication Machinery, Metalworking Tools

PROFESSIONAL EXPERIENCE

Additive Manufacturing Design Engineering Intern, Honeywell Aerospace – Phoenix, AZ May 2025 – August 2025

- Designed 10+ CAD models using Siemens NX for a microelectronics chassis assembly by referencing legacy drawings, enabling complete transition to metal additive manufacturing (AM) and securing multiple internal orders
- Accelerated fabrication of experimental exit guide vanes by validating printability in Materialise Magics, verifying tolerances via CT and 3D scan data, and delivering functional prototypes months ahead of hog out build schedule
- Streamlined thermostat housing design for next-generation engine platform's anti-ice mechanism by utilizing iterative prototyping and geometric deviation analysis, leading to its successful implementation for research and development

Manufacturing Engineering Intern, Mercury Systems – Phoenix, AZ August 2022 – July 2024

- Led redesign and deployment of tooling fixtures to resolve galvanic corrosion issues, while collaborating with interdisciplinary teams to ensure timely processing of space-qualified rad-tolerant printed circuit board assemblies (PCBAs) valued at hundreds of thousands of dollars each
- Oversaw fabrication of a low-cost circuit board for wire bond tool qualification, enabling consistent initialization of bonding parameters while generating file package consisting of technical drawings, bill of materials, and IDF files for seamless Electrical Computer Aided Design integration
- Engineered electromechanical system that optimized PCB potting process, doubling processing speed and production volume by improving pot life stability and operational ease of use

Mechanical Assembler, Mercury Systems – Phoenix, AZ August 2021 – August 2022

- Developed 3D printed custom fixtures to support PCB depaneling operations, improving setup time and processing speed by allowing operators to have reliable and ready-to-use fixtures for multi-board processing
- Ensured high-quality production efficiency by mastering circuit board manufacturing tools, including wave solder machinery, x-ray inspection, and conformal coating machinery, while maintaining rigorous operational standards
- Achieved a 1% defect rate by assembling and inspecting hundreds of electronics weekly per IPC industry standards, spanning Class I to Class III electronic assemblies

TECHNICAL PROJECTS

"Susano'o" NAR L2 Rocket: SEDS Rocketry Club June 2025 – Present

- Built a phenolic airframe rocket powered by an H-100 solid motor, targeting 2,500 ft and Mach 0.5 per OpenRocket simulations, while integrating onboard GPS-enabled avionics for telemetry and recovery validation

Kerosene/LOX Turbopump: APEX Club January 2025 – Present

- Generated turbopump components like rotors, housings, and impeller assemblies using CFTurbo & Fusion 360, leading to an Inconel 718 additively manufactured impeller in collaboration with Honeywell Aerospace engineers

Triple Lunar Rover System, NASA L'SPACE Program: Mission Concept Academy (MCA) August 2024 – December 2024

- Integrated mechanical subsystems for a simulated lunar lava pit mission, leading design, material selection, and FMEA, while producing NX subassemblies across three rovers that balanced performance, manufacturability, and cost
